

# I promised China Wireless would be my next rags-to-riches Asian growth stock, and shares are already up from 5¢ to 47¢!

Subscribers following my advice have seen every \$2,000 invested increase by \$17,840 in just 15 months.

Jump on board my next rags-to-riches recommendation! This is a tiny company with an almost-cure for diabetes. It allows diabetics to cut their insulin injections from up to 5 times a day to just once every 3 months.

Dear Investor:

I knew China Wireless was going to be a grand-slam home run when it came up with an ingenious solution to a problem that drives China's 700 million cell phone users crazy: it costs a lot to call from one cellular network to another.

That's why many Chinese carry several cell phones -- one for each network. What a pain in the neck!

When China Wireless came up with a cell phone that gives you two telephone numbers (one for each network) in one handset, I was sure these phones would take off like a bat out of hell. And they did. Subscribers following my recommendations are already up 892% in just 15 months.

Recommended Asian growth stock	% Gains	Gains from a \$2,000 investment
Yanzhou Coal	<b>1,198%</b>	\$23,960
China Wireless	<b>892%</b>	\$17,840
Raffles Education	<b>908%</b>	\$18,160
Beijing Land	<b>1,932%</b>	\$38,640
<b>Total gains</b>		<b>\$98,600</b>

It's hard to top that. But subscribers who followed my recommendations on Yanzhou Coal did.

80% of China's electricity is generated from coal-fired power plants. And while most of China's coal mining industry was making do with decades-old technology, Yanzhou was bringing in the latest modern technology from America and Australia.

I could see this was going to become one of the lowest-cost,

More...

fastest-growing coal miners in China. So I recommended Yanzhou Coal, telling subscribers to get in while shares were still just 18¢ each. I told them to take profits when shares hit \$2.18. I'm sure 1,198% profits would perk up your portfolio.

Likewise for Beijing Land, which I recommended shortly after they bought up huge swathes of prime real estate in China's fastest-growing cities.

China was (and is) undergoing a massive migration from rural rice paddies to cities. So I could see urban land was going to be red-hot. If you had gotten in when I recommended Beijing Land, you could've turned every \$2,000 invested into \$38,640.

Asia is a part of the world where capitalism is not a dirty word.

So, it's where economic growth is strong ... where many countries didn't go through a recession ... and where taxes are not confiscatory.

This is why Asia is such fertile ground for finding rags-to-riches companies that will grow your money explosively.

### **My next rags-to-riches reco is a tiny Asian company with an almost-cure for 246 million diabetics**

This company's technology allows doctors to inject healthy but foreign insulin-producing cells into the patient's body without triggering attacks by his immune system.

The cells then produce the insulin the patient needs without 2 to 5 daily insulin injections. In most cases, the cells last anywhere from 3 months to 3 years.

Obviously this almost-cure can dramatically improve and lengthen the lives of diabetes sufferers. And many of them are well-to-do, and would spend almost any amount of money to say good-bye to those horrible daily insulin injections.

It looks like Russia is going to be this company's first major market. Russia has the third-largest diabetic population in the world. The clinical trials there have been a huge success.

And the company's technology just received regulatory approval from Russia's equivalent of the FDA -- whose standards are accepted by many other European countries.

Once this almost-cure is on the market in Russia, there's going to be a flood of wealthy Americans and Europeans flying in for treatment.

Indeed, the company mentioned on its website that a new clinical study requiring volunteers was about to begin in New Zealand. Within a few weeks they had more than 30 times as many volunteers as they could handle.

## **This technology is also being used to treat Parkinson's and other incurable diseases**

The key to the success of this company's methodology is the ability to insert foreign cells without triggering an attack by the person's immune system. It accomplishes this by encapsulating the cells in a way that makes them invisible to the body's defensive systems.

And once you can introduce foreign cells without fear of rejection, it opens the door to treating a host of previously incurable diseases.

For example, this company's encapsulation technology is also being used to safely implant healthy but foreign brain neurons to treat Parkinson's disease. Early trials are showing a lot of promise.

And just recently, one major international pharmaceutical company licensed this tiny company's patented, proprietary technology to test novel treatments for a variety of other diseases.

A second major pharmaceutical company licensed the technology as part of a revolutionary way to treat wounds.

Between the almost-cure for diabetes, the groundbreaking work on Parkinson's (and Alzheimer's), the Russian regulatory approvals, and the two new licensing agreements with major pharmaceuticals, it seems clear to me that this still-tiny company is headed for the big time.

But because the clinical trials are going on in Russia and New Zealand, on the other side of the world, American investors don't know squat about it.

Still, just the almost-cure for diabetes alone could have the same blockbuster impact that Viagra did when it first hit the market. And Viagra, in its first year, added about \$65 billion onto drug giant Pfizer's market cap.

### **1% of the boost that Viagra gave Pfizer would be enough to send this stock from 26¢ to \$4.16**

That could turn every \$2,000 invested into as much as \$32,000 -- profits comparable to those of China Wireless, Yanzhou Coal, and Raffles Education.

I'm Brian Tycangco, and I've spent my entire professional life finding rags-to-riches Asian growth stocks like these, and inspecting their operations in places like Hong Kong, China, Thailand, Singapore, and the Philippines.

## What people are saying about my recommendations ...

\$19 reco goes to \$158: "I bought 1,000 (Legend) shares at \$19.00 and when it reached \$158.00 it split 4 for 1." -- Ron L., Utah

Fong's delivers 800% profits: "We took 800% profits last week on our entire Fong shares position after your sell recommendation. Another great call."  
-- Peter S., California

Wishes he had bought more: "Tsingtao Brewery up 267% ... Anhui Conch Cement up 325% ... actually wished I had purchased more." -- Gert S., Massachusetts

Made a killing: "Great job! I have made a killing on Legend [Holdings] and [Zi Corp] in particular. I participate in other similar services, but none have lived up to yours." -- William P., Alabama

Another grand slam: "Thanks for another grand slam. Bought in at your first advice. Now close to 450% profit. I think Brian has the best perspective on Asian investing of any advisor."  
-- Leonard F., New Jersey

Quadruples his money: "I absolutely love your service. It has helped me to make near 300% since last summer." -- Ron D., Washington

62% in a week!: "I bought at 4.90. Sold a week later at 8.25. Bought a couple of days later (yesterday) on the days low at 7.05. Nice quick 62% profit on first trade and up already about 3/4 of a point on new buy yesterday."  
-- Jack A., Massachusetts

Made more money than all other publications combined:  
"I subscribed to more publications than I can count over the last 15 years and made more with yours than all the others combined!"  
-- Cheryl R., Texas

All the stocks I recommend can be easily bought through a regular US broker. I can't guarantee that future recommendations will be as profitable as past ones. They may not be profitable at all. Or they may be twice as profitable. In the past 24 months, I recommended 20 stocks. 14 are up and 6 are down. The average gain, the losers included, is 103%.

The recession in the West hasn't slowed me down a bit, because I operate in Asia, where most big economies didn't have recessions. That means there's a large variety of juicy opportunities waiting for you in different sectors of the world's fastest-growing economies. For example ...

### **Pile up profits up to 438%, 322%, and 370% in Asian natural resource stocks**

Because of their booming economies, the Asian countries have insatiable appetites for natural resources. And that opens the door to huge profits for you.

For example, my subscribers bagged another 370% in Semafo, a company mining gold in New Guinea. MacMahon Holdings, an Australian mining company, gave them profits of up to 438%.

After seeing how well Yanzhou Coal was performing for my readers, I recommended Excel Coal, a low-cost Australian miner, exporting to China and India. Subscribers bagged up to 289% and 322% on two recos.

Now, I'm urging my subscribers to buy into a third coal-mining company, this one doing in India what Yanzhou and Excel did in China. It's bringing low-cost coal to coal-starved power plants where booming economic growth is sharply increasing demand for electricity.

Sales to India more than doubled last year, and the company already has the contracts to double sales again this year. I think this is going to do at least as well as Excel Coal, and potentially as well as Yanzhou (1,198%).

### **Asian technology stocks are another source of huge profits**

Asia is the home to many small companies with cutting edge technology. This is because Asia, more than any other part of the world, emphasizes math and science in its high schools.

Universities in India and China graduate 950,000 scientists and engineers every year. By contrast, America graduates only 70,000. So naturally, Asia is rising as a hub for technological innovation.

China Wireless is an example of this kind of technological innovation. It piled up 892% gains for subscribers on the heels of a modest advance in cell phones.

Zi Corp was a similar story, only in software. These guys came up with a hardware/software package that allows computers and cell phones to use Korean, Japanese, and Chinese characters.

More...

What a huge benefit! Suddenly, the huge populations of these three countries no longer had to learn the English alphabet to use the keyboard. When I saw my colleague's Chinese girlfriend using Zi Corp's software -- and loving it -- I was sure I had a winner. Subscribers following my recommendations walked away with up to \$3,430 for each \$1,000 invested, in just four months.

Ditto for a company called GRIC, which I recommended because they were an early bird in Asian wireless Internet. Again, subscribers following my recommendations more than tripled their money, this time in six months.

Right now, my subscribers are beginning to pile up big gains in a small, high-tech start-up that developed revolutionary technology for water purification and desalinization. It slashes costs, increases efficiency, and is allowing this company to grab market share from competitors 100 times as large.

Indeed, it recently bagged contracts to build what will be the world's three largest desalinization plants. As it continues to grow and grab market share from the competition, I expect the shares to rise 10-fold.

### **Bag up to 493% profits in manufacturing companies**

My subscribers are also piling up giant-sized gains in industries that you probably wouldn't touch with a barge pole if they were in the United States, such as manufacturing. How can US manufacturers paying \$40 an hour compete with Chinese and Indian companies paying 75¢ an hour?

This allows Asian companies to cut the cost of goods, and is one of the reasons I recommended Tata Motors. Tata is an Indian company that knocked the price of a new car down to \$2,000. With rave reviews from the automotive magazines and a price 75% cheaper than its closest competitor, I could see it was going to be hugely popular. It's been just a year now, and subscribers following my advice are already up 290%.

The sharply reduced costs allowed Techtronic Industries to flourish by building appliances that are then sold under famous Western brand names like Hoover, Sears Craftsman, and Dirt Devil. My subscribers bagged 301% profits in Techtronic.

I'm sure you've never heard of Fong's Industries, a Chinese company that makes non-polluting textile dyeing machines, of all things. So when Beijing told its 45,000 textile factories to "Stop the pollution; either upgrade your equipment or shut down," I told my subscribers to buy shares in Fong's. My subscribers walked away with profits of up to 493%.

And this is just scratching the surface of all the ways you that you could make large sums of money with the right Asian growth stocks. For example ...

- Medical Care: A for-profit Asian hospital company offers state-of-the-art medical care for a tiny fraction of the cost in America. For example, open-heart surgery for \$9,000; a breast lumpectomy for \$250; or a Caesarian birth for \$950. I use their hospitals myself, and they give great medical care and service as well as saving on the cost. But more to the point, my subscribers are already up 61%.
- Air Travel: It ain't easy getting around in China; there aren't many roads and most are dirt. So with a booming economy, it was clear to me air travel would grow like gangbusters. I gave a buy reco 14 months ago for Air China, the country's leading airline. Subscribers are already up as much as 242%.

The easy money is probably history on Air China. But I think you're going to be able to pick up profits like that in the shares of one of Asia's leading tour operators, and in another company that's in the enviable position of getting a dollar for every plane ticket sold in China.

- Construction: I knew China State Construction, a major road builder, was going to be a big winner when China announced its \$580 billion infrastructure spending program. My subscribers have already more than doubled their money in just 18 months.

Isn't it time to stop leaving money like this on the table? Especially when you can ...

### **Subscribe to my Asian Growth Stocks for as little as \$8 a month**

Subscribe on my convenient monthly billing program (\$8 a month, charged to your credit card), and you'll save \$48 from the regular \$144 annual rate.

In addition, you'll get my Special Report "My next rags-to-riches stock: A tiny company with an almost-cure for diabetes." Instead of needing 2 to 5 insulin injections a day, diabetics are going to need just one every 3 months. This is a company that I think is going to give you profits like China Wireless (892%) or Beijing Land (1,932%).

Send me your e-mail address and I'll rush the report to you by e-mail, so you can get in immediately.

What can you lose? You're not locked in. You can cancel out of the monthly billing program at any time. Meanwhile, the Special

More...

Report and the issues you receive are yours to keep. And you get an entry into a whole new world of companies like China Wireless, Yanzhou Coal, and Raffles Education, that are piling up huge gains for my subscribers. All for a puny \$8.

Or, for an even better deal, sign up for a full year, just \$82. You save \$62 off the regular \$144 rate; get the Special Report on the small company with the almost-cure for diabetes; and I'll send you two additional Special Reports as bonuses ...

- \*\* One is on the small Asian water purification company that just landed contracts for the three largest desalinization plants in the world. They're piling up large profits and growing explosively by snatching one multi-million dollar contract after another away from the Goliaths of its industry. As it continues to grow and grab market share from the competition, I expect the shares to rise 10-fold.
- \*\* The second report is on the Asian for-profit hospital company offering state-of-the-art medical care for a tiny fraction of the cost in America. For example, open-heart surgery for \$9,000; a breast lumpectomy for \$250; or a Caesarian birth for \$950.

Already hundreds of thousands of Americans are traveling abroad each year for medical care. The passage of Obama's medical bill is going to open the floodgates. This is another company that has the potential to give you profits like China Wireless and Yanzhou Coal.

Use the coupon enclosed, or phone Andrea at 1-888-388-6403 (toll-free in the US and Canada) or 1-843-388-2942. She'll enter your subscription and rush you your Special Report. We're open 24 hours a day, 7 days a week.

Yours sincerely,

Brian Tycangco, Editor
